Re: LightSquared Subsidiary, LLC
Ex Parte Communication. IB Docket No. 11-109
IBSF File No. SAT-MOD-20101118-00239

Dear Marlene:

I am writing this a concerned citizen and a licensed Land Surveyor in the states of Wisconsin and Illinois to inform you that as a user of high-precision GPS, I oppose LightSquared's request (which ignores the recent independent test results) to affirm its license and its request to go forward with its plan.

I recently watched again the documentary "Enron, The Smartest Guys in the Room" and this request by LightSquared is philosophically identical the request of the SEC by Arthur Andersen as Enron's accountant to allow mark to market accounting principles. This request by LightSquared completely disregards all other users of the affected frequency bands. As a user of High Accuracy GPS I have absolute certainty that all of the high accuracy GPS systems used within the affected range of the new LightSquared towers will be rendered inoperable.

If the investors in LightSquared are negatively impacted by refusal of the FCC to allow their plans to be completed I would argue only that these investors should have done more concerted due diligence when researching this investment. The money that they lose on this venture will pale in comparison to how this would adversely affect the nation's economy if it is allowed.

Sincerely,

Marc A. Londo
